

Example Patient Journey

We understand that trying to plan the potential cost of your fertility treatment can feel overwhelming. We have created this example patient journey to help you understand what a typical IVF cycle may involve, and the associated costs.

Below you will find an example of a treatment plan. Please bear in mind that every patient's treatment plan will vary based on their individual situation, but this can be a good starting point.

Please note: This is a guide only and costs may not always be up-to-date. Before booking, please refer to our [Fees](#) page for the most up-to-date prices.

Initial Assessment

Initial Consultation	£260
Baseline Ultrasound Scan by a consultant if needed	£230
AMH blood test (unless already done)	£200
